

## Unrhymed Tercets

### Naming New Moonlets for a Planetoid

Pluto now a dwarf planet  
with an icy orb mini-moon  
smallest of five known moons.

Largest moon is Charon  
Two smaller moons Nix and Hydra.  
Two unnamed moons P4 and P5.

They want to name the new moons  
after Greek mythology.  
Why is Greek to me.

Why not Google and Yahoo  
as they are companions  
connected to the demoted planet.

The moons may have formed  
by collisions in the Kuiper Belt--  
a disk teeming with possible moonlets.

A faint fleck in Hubble images  
P4 is 8-21 miles wide.  
P5 is 6-15 miles wide.

New Horizon Mission  
faces navigational hazards  
with these bitty bodies beyond Neptune.

Greetings new moons,  
they know where you are.  
Peaceful orbiting.

## Unrhymed Tercets:

1. Unrhymed three-line stanzas can be flush left, centered or indent.
2. They can be metered or have a set syllable count. This example is free.
